- 2 way communication
- Data Integration

## Next Gen Tracking | An Agnostic AR Platform

The TWNKLS STAR Platform is made to provide your company the benefits of AR without having to commit to something that you know is going to change anyway. No vendor lock-in, no planned obsolescence, full benefits to you and your workers. You are free to apply TWNKLS augmented reality to your business however and at whatever pace you like.

The Next Gen Tracker forms the technological basis of the STAR Platform. It consists of a modular system designed to offer robust tracking for every situation. We offer a multimodal tracking platform that implements both our proprietary and 3rd party tracking methods to deal with challenging, real world situations. Future expansions will only strengthen the system.

Our platform supports a host of devices running either Windows, Linux, iOS, or Android. Phones, tablets, and smart glasses. From Meta to Tango, and from Hololens to iPad, the modular make-up ensures optimal tracking for every moment.

This cross-platform, device-agnostic, and tracking agnostic approach is unique in the world, and makes for a robust and futureproof technical basis for your company.

# ABOUT TWNKLS

At TWNKLS we believe that augmented reality is the most natural way to give you the information you need, when you need it. We have been creating custom augmented reality tools since 2011. Our high-end applications can be found everywhere from oil rigs to assembly lines.

“Give your operators the information they need, when they need it”

## Transform your business with AR

Our radical technology enables a whole range of new features. We have included all of these features in the STAR Platform. This platform is the result of six years of experience with high-end applications, ranging from the police to offshore installations.

We offer to-the-millimeter exact measuring, accurate outdoor and indoor localization, real-time remote assistance, as well as back-end connectivity to effortlessly be tied in to your company's workflow.
